New HSLmobile heads to regions to promote preparation of high-speed lines

Already in April, the new VRTmobil (HSLmobile) will head to the regions to bring the preparation of high-speed lines (HSL) closer to the people in their vicinity. Its main objective is to strengthen the communication of the project. The mobile information centre was presented for the first time today at the conference Železnice 2023 (Railway 2023) organised by SUDOP Praha together with Správa železnic.

The thirteen-metre-long set, which, including the towing car, will occupy an area of almost 15 x 5 metres when the trailer is unfolded, will serve as a mobile centre where people can find out all the information about the preparation of high-speed lines. Together with HSL experts, it will visit selected locations across the Czech Republic in the coming months. The HSLmobile is equipped with audio-visual equipment, will offer visitors promotional materials and also facilities for discussion with experts.

The mobile information centre will complement the project's communication, which includes the traditional presentation days at Prague Main Station, the information centre in Ústí nad Labem, social networks and also personal meetings with the public, associations and local governments directly in the regions.
